

Setting up Python Environment variables

1. Find your Python folder path in windows

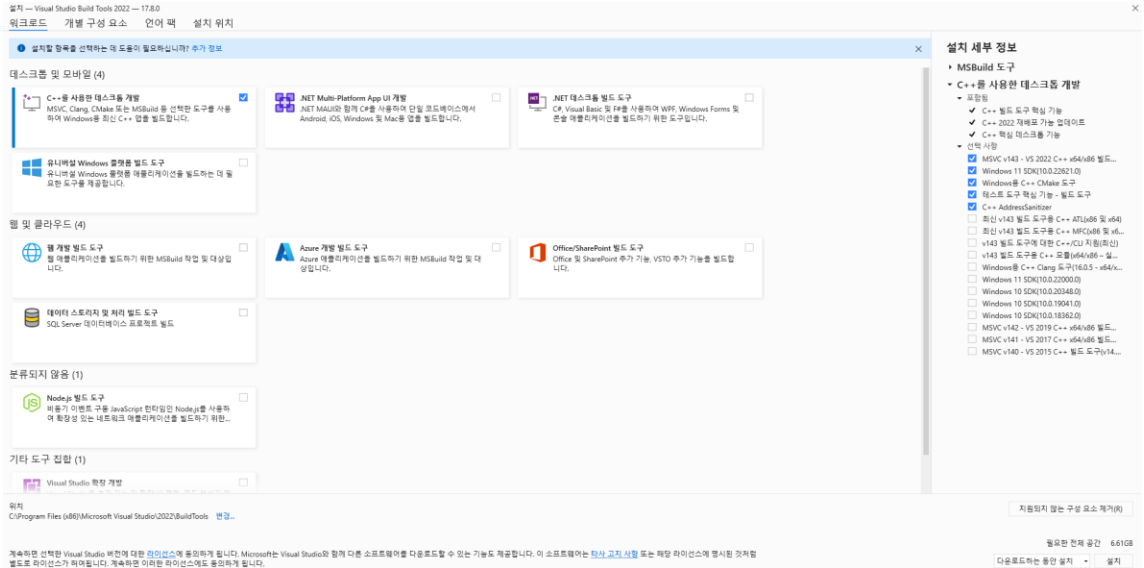

2. Make sure Python is added to PATH.

3. install Microsoft C++ Build Tools

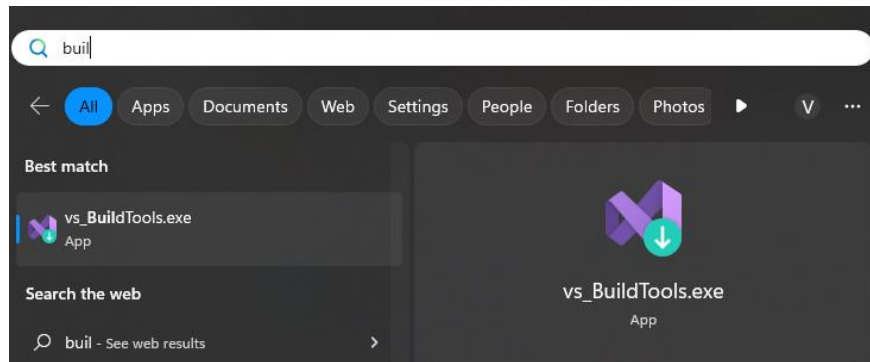

1. Go to this page: <https://visualstudio.microsoft.com/visual-cpp-build-tools/>
2. Click on "Download Build Tools" and run what you downloaded
3. Click on "Install" (a window with different options to click should show up)
4. Click only on "Desktop Development with C++" and click on install (image for reference)

- 5.
6. Reboot your system

If you have already installed Microsoft C++ Build Tools before, it needs to be modified

Search for build tools

Visual Studio Installer

Installed Available

All installations are up to date.

Visual Studio Build Tools 2022

17.7.0

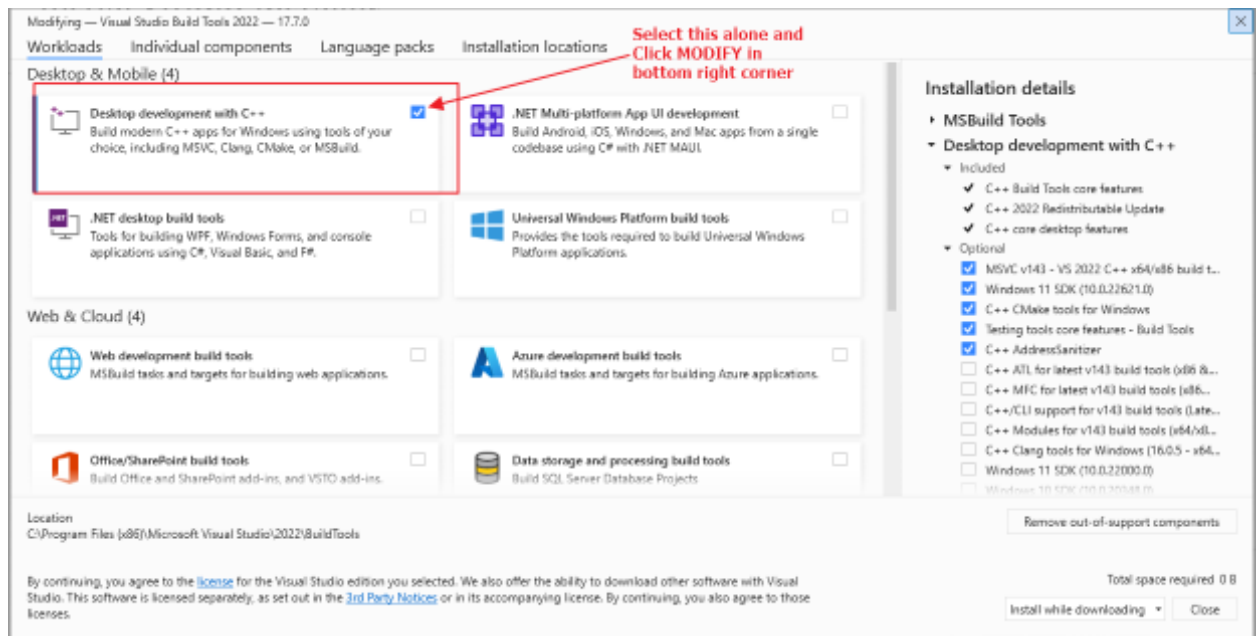

The Visual Studio Build Tools allows you to build native and managed MSBuild-based applications without requiring the Visual Studio IDE. There are options to install the Visual C++ compilers and libraries, MFC, ATL, and C++/CLI support.

[Release notes](#)

Modify

Launch

More ▾

4. Python Virtual Environment

Activate your Python virtual environment

Execute these commands:

```
source genai/bin/activate  
python -m pip install -r requirements_venv.txt
```

.\genai\Scripts\activate

Source doesn't work in windows. Use this

5. Change requirements_venv.txt

```
requirements_venv.txt
